

Business Requirements Document

ReqAgent — AI Requirement Intake & Tracker

Author: Steven Saji Paul | Role: Business Systems Analyst

Version: 1.0 | Date: June 2026 | Status: Final

1. Executive Summary

Organizations lose significant time and accuracy in the requirements intake process. Business Analysts manually collect stakeholder input, interpret vague descriptions, draft user stories, and maintain traceability — a process that is slow, inconsistent, and error-prone.

ReqAgent addresses this gap by automating the translation of raw stakeholder input into structured, actionable documentation using LLaMA 3.3 70B. The system reduces requirements documentation time by an estimated 65% while improving consistency and auditability.

2. Business Objectives

ID	Objective
BO-01	Reduce time spent on requirements documentation by 65%
BO-02	Standardize user story format across all departments
BO-03	Enable real-time visibility into requirements pipeline status
BO-04	Provide audit-ready traceability from business need to acceptance criteria
BO-05	Detect requirement conflicts before they reach engineering

3. Problem Statement

Current State

- Requirements collected ad hoc via email and meetings
- BAs manually transcribe and interpret stakeholder input
- User story quality is inconsistent across analysts

- No centralized system for tracking requirement lifecycle
- Traceability matrices maintained manually in spreadsheets
- Conflicts discovered late — often during development

Desired State

- Stakeholders self-serve through a structured intake form
- AI automatically generates standardized user stories and acceptance criteria
- All requirements stored, tracked, and auditable in a central system
- Conflicts detected at intake — before any development begins
- Traceability matrix auto-generated and downloadable on demand

4. Stakeholders

Stakeholder	Role	Interest
Business Analysts	Primary users	Reduce documentation burden
Business Stakeholders	Requirement submitters	Fast, structured intake process
Engineering Teams	Consumers of user stories	Clear, unambiguous requirements
Project Managers	Oversight	Pipeline visibility and status tracking
Compliance / Audit	Reviewers	Traceability and audit trail

5. Business Requirements

ID	Requirement	Priority
BR-01	System shall provide a structured intake form for stakeholders	Must Have
BR-02	System shall auto-generate user stories from free-text input	Must Have
BR-03	System shall classify requirements using MoSCoW framework	Must Have
BR-04	System shall assign priority based on submitter role	Must Have
BR-05	System shall detect conflicts with existing requirements	Must Have
BR-06	System shall track requirement lifecycle from submission to completion	Must Have
BR-07	System shall maintain a full audit trail of status changes	Should Have
BR-08	System shall generate a downloadable traceability matrix	Should Have

ID	Requirement	Priority
BR-09	System shall provide an analytics dashboard with pipeline metrics	Should Have
BR-10	System shall store raw intake separately from structured output	Must Have

6. Scope

In Scope

- Web-based requirements intake form
- AI-powered user story and acceptance criteria generation
- MoSCoW classification and priority scoring
- Conflict detection against existing requirements
- Requirement lifecycle management with status tracking
- Audit trail for all status changes
- Traceability matrix generation and CSV export
- Analytics dashboard

Out of Scope

- Integration with Jira or Azure DevOps
- Email notifications
- Role-based access control
- Mobile application
- Multi-language support

7. Success Metrics

Metric	Target
Requirements documentation time	Reduced by 65%
User story consistency score	90%+ standardized format
Conflict detection rate	100% of submissions scanned
System uptime	99%+
Stakeholder adoption	80%+ of BAs using within 30 days

8. Risks

Risk	Likelihood	Impact	Mitigation
AI generates inaccurate user stories	Medium	High	BA review step before approval
API rate limits on free tier	Medium	Medium	Implement retry logic and caching
Stakeholder resistance to self-service	Low	Medium	Training and onboarding sessions
Data privacy concerns	Low	High	No PII stored; credentials in env vars
