

Process Flow — As-Is vs To-Be

ReqAgent — AI Requirement Intake & Tracker

Author: Steven Saji Paul | Role: Business Systems Analyst

Version: 1.0 | Date: June 2026 | Status: Final

1. Purpose

This document compares the current (As-Is) requirements intake process with the proposed (To-Be) process enabled by ReqAgent. It identifies pain points, process improvements, and measurable outcomes.

2. As-Is Process — Current State

Step	Activity	Pain Point	Time
1	Stakeholder describes requirement verbally or via email	Unstructured, easily misunderstood	30-60 min
2	BA schedules follow-up meeting to clarify	Delays of 1-3 days before work begins	60-90 min
3	BA manually transcribes requirement notes	Time-consuming, error-prone	45-60 min
4	BA drafts user stories from notes	Inconsistent format across analysts	60-90 min
5	BA writes acceptance criteria for each story	Quality varies; often incomplete	30-45 min
6	BA manually checks for conflicts with existing reqs	Often missed; discovered in sprints	30-60 min
7	BA creates traceability matrix in spreadsheet	Manual, error-prone, goes stale quickly	90-120 min
8	BA updates JIRA with status changes	No audit trail of who changed what	15-30 min

Total estimated time per requirement: 6-8 hours

3. To-Be Process — Future State with ReqAgent

Step	Activity	Improvement	Time
1	Stakeholder submits structured intake form	Structured, no misinterpretation	5-10 min

Step	Activity	Improvement	Time
2	System saves raw intake to MongoDB	Instant, no manual effort	< 1 sec
3	AI generates 3 user stories with acceptance criteria	Consistent format, immediate output	< 10 sec
4	AI assigns MoSCoW classification and priority score	Role-weighted, objective, documented	< 10 sec
5	System scans for conflicts against existing requirements	100% coverage, immediate detection	< 10 sec
6	BA reviews AI output and updates status	5 min review vs 3-4 hours of writing	5-10 min
7	Traceability matrix auto-generated and downloadable	Always current, zero manual effort	< 1 sec
8	Status changes auto-logged with full audit trail	Complete history, no manual logging	< 1 sec

Total estimated time per requirement: 20-30 minutes

4. Process Improvement Summary

Metric	As-Is	To-Be	Improvement
Time per requirement	6-8 hours	20-30 minutes	~65% reduction
User story consistency	Variable by analyst	Standardized format	100% consistent
Conflict detection rate	Ad hoc, often missed	100% automated scan	Full coverage
Traceability matrix currency	Updated manually (stale)	Always current (auto-generated)	Real-time
Audit trail completeness	Partial (JIRA only)	Full (every status change logged)	Complete
Time to first user story	2-3 days (meetings + writing)	< 10 seconds	99% reduction

5. Process Flow Diagrams

As-Is Flow

Stakeholder

- > Email / verbal requirement description
- > BA schedules clarification meeting (1-3 day delay)
- > BA manually transcribes notes (45-60 min)
- > BA drafts user stories (60-90 min)
- > BA writes acceptance criteria (30-45 min)
- > BA checks conflicts manually (30-60 min, often missed)
- > BA creates Excel traceability matrix (90-120 min)
- > BA updates JIRA (15-30 min)

TOTAL: 6-8 hours per requirement

To-Be Flow

Stakeholder

-> Fills ReqAgent intake form (5-10 min)

-> System saves to MongoDB (< 1 sec)

-> Groq AI generates stories + criteria + MoSCoW + conflicts (< 10 sec)

-> Results displayed immediately to stakeholder

-> BA reviews output (5-10 min)

-> BA updates status in tracker

-> Audit log entry auto-created (< 1 sec)

-> Traceability matrix auto-updated (< 1 sec)

TOTAL: 20-30 minutes per requirement
